Detailed description of project						Type of services provided		
<p>The Building Schools for the Future project in Libya has the objective to upgrade or rehabilitate existing schools and to build new schools that take into consideration the needs of young children, their teachers and staff by creating a modern, safe and inspiring learning environment.</p> <p>Under the project two exemplary schools in the Asbah Al Subh School in Tripoli and Al Huryaa in El Baida were established. On both schools DCVI installed a complete language lab, a smart class room and demonstration room for all equipment for sports, music and arts & craft, all including necessary furniture, tools and ICT equipment.</p> <p>Main feature of the project was to integrate ICT based learning at secondary school level. This was done through the smart classroom concept in which practical science experiments are combined with virtual science experiments, allowing the students to learn through trial and error in a safe environment. Also the new ICT infrastructure included student monitoring, tracking and recording systems.</p>						<p>Cadena was responsible for;</p> <ul style="list-style-type: none"> ✓ Project design and coordination during implementation ✓ Training for installation and maintenance purpose in the Netherlands ✓ Training of secondary school teachers in Libya at both schools on the use of the smart classroom and language laboratories ✓ Training included mapping experiments with the curriculum, basic ICT skills and pedagogy related to the use of the new science and language laboratories. ✓ Organization of the “launch ceremony”
